SUMMARY

Software Engineering student at KFUPM with hands-on experience across full-stack development, business intelligence, software testing, and machine learning. Delivered enterprise Power BI dashboards and a full-stack driver management portal during a summer internship in IT/Master Data Management at ASMO, an Aramco-DHL Supply Chain joint venture. Proficient in Python, Java, JavaScript, SQL, React, Node.js, and Power BI.

EXPERIENCE

ASMO (Advanced Supply Management Operations) – IT / Master Data Management (MDM) Intern

Jun 2026 – Aug 2026 | Dammam, Saudi Arabia

- Automated daily monitoring and reporting across multiple enterprise systems by building interactive Power BI dashboards, replacing a manual Excel-based process.
- Digitized an internal business workflow by building a full-stack web application (React, Node.js, MySQL) as both frontend and backend developer, adding role-based access and automated notifications.
- Evaluated vendor proposals for a data management initiative as part of a cross-functional team.
- Designed and deployed a web platform to present a data analytics prototype to stakeholders.

PROJECTS

KFUPM – Software Engineering Projects

Jan 2022 – Present | Dhahran

Fuzzing Project for Software Testing

May 2026

- Uncovered crashes and security vulnerabilities in bzip2 by conducting automated, coverage-guided fuzz testing with AFL++ and AddressSanitizer.

Horse Management System

Jan 2025

- Centralized horse profiles, training records, and daily operational data by designing and implementing a relational SQL database.

Portfolio Website

Nov 2024

- Built and deployed a responsive personal portfolio website to showcase technical projects and skills.

Learn Hub

Jul 2024

- Increased student engagement with online learning services by designing and developing a full-stack educational platform with Figma-based UI/UX.

KFUPM Student Impact Hub

Jun 2023

- Co-built a community service platform connecting students with organizations, contributing to requirements gathering and UI design.

Car Classification System

Aug 2022

- Built a Python machine learning model to classify used vehicles in Saudi Arabia, covering data preprocessing, feature engineering, and evaluation.

EDUCATION

Bachelor of Science in Software Engineering, King Fahd University of Petroleum and Minerals (KFUPM)

Aug 2022 – Present | Dhahran, Saudi Arabia

Relevant Coursework: Software Design & Architecture, Web & Mobile Development, Database Systems, Data Structures & Algorithms, Software Requirements Engineering

SKILLS

Software Engineering: Software Testing, Requirements Engineering, OOP, Agile Development, System Analysis & Design

Programming Languages: Python, Java, JavaScript, SQL

Business Intelligence & Data: Power BI, DAX, Power Query (M), ETL, Data Analysis, Data Preprocessing

AI & Machine Learning: Machine Learning Fundamentals, Model Evaluation, Predictive Analytics

Web & Backend Development: HTML, CSS, React, Node.js, Express.js, REST APIs, JWT Authentication

Databases: SQL, MySQL, MongoDB, Relational Schema Design

Tools & Technologies: Git, VS Code, PyCharm, Figma, Postman, Vercel, Microsoft Office Suite

LANGUAGES

Arabic: Native | **English:** TOEFL (530)
